Please review attached memo by H. W. Lichtenburger concerning the disposal of electrical equipment. Note that it goes beyond transformers, and applies to electrical switches, fluorescent light ballasts, and capacitors. These directions have been endorsed by J. C. Soviero and we must meet this policy. Awareness by our people is key.

I beleive it is also important that the Plant Instructions Manual Policy G-201A on Material Passes be reveiwd and followed as it can prevent us from getting into related problems.

Subject: Disposal of Electrical Equipment

As part of C&P's overall program to reduce long-term liability and decrease the use of landfills, it will be the policy within C&P to absolutely prohibit the landfill disposal of PCB transformers and other equipment without the specific approval of a Division President or higher authority. Approval is to be granted only if there is no practical alternative to land disposal.

This policy is not limited to electrical transformers, but applies to such things as electrical switches, fluorescent light ballasts and capacitors.

UCC's UNISON subsidiary is an excellent resource to provide advice and service relative to the retrofitting of existing PCB transformers. The C&P HS&EA Group can provide additional guidance, if needed, in implementing this policy.

Please communicate this policy to all responsible individuals in your respective organizations.

Very truly yours,

A handwritten signature in dark ink, appearing to be "B:4" or similar, written over the typed name.

H. W. Lichtenberger
